

XM Satellite Radio is a boon for me. I listen to radio for the uninterrupted music. The ability to check on the traffic for my location at any time also helps considerably since it's when I want it and not when a local broadcaster chooses to air the information. I pay for the service so it's a commercial venture just like NAB members are. Just because their revenue source is different shouldn't prohibit viable competition. Please allow XM Satellite Radio to continue its current broadcasting of Instant Traffic and Weather and any new local programs they may design.
